

Opioid Addiction and Treatment in Missouri

by Grand Falls Recovery Center | Mar 1, 2023 | Addiction

It's no secret that the [opioid](#) epidemic has taken a toll on communities across the United States. In Missouri, the statistics are overdoses in 2017 alone.

But what do these numbers actually mean? And what can be done to address this growing problem? In this blog post, we'll take a closer look at the opioid epidemic in Missouri, exploring both the statistics and the treatment options that are available. Read on to learn more.

Missouri Is One of the States Hit Hardest by the Opioid Epidemic

Opioid addiction has quickly become a leading public health crisis in the United States, with Missouri at the forefront of the epidemic. In 2022 alone, there were 34,794 opioid-related overdose deaths – a shocking statistic that further highlights just how significant this challenge is to our state.

Unfortunately, several barriers stand in the way of effective treatment and support for those struggling with opioid addiction in Missouri, underscoring the need for progress in addressing this devastating fight.

Through strict enforcement measures and targeted initiatives, however, we can reduce its prevalence and ensure those suffering from opioid addiction receive the help they need to move forward with their lives.

Opioid Addiction Signs and Symptoms

Physical Symptoms of Opioid Addiction May Include:

- Changes in sleeping patterns
- Changes in appetite
- Weight loss or gain
- Fatigue
- Nausea or vomiting
- Muscle aches and pains
- Constipation
- Dilated pupils
- Slowed breathing

Psychological symptoms of opioid addiction may include:

- Anxiety
- Depression
- Mood swings
- Irritability
- Paranoia
- Impaired judgment

Opioid Addiction Can Also Lead to Social and Behavioral Problems, Such As:

- Relationship problems
- Job loss or financial problems
- Legal problems

Treatment Options for Those Struggling with Addiction

• Detoxification

[Detoxification](#) is the first step in treating opioid addiction. During this process, patients are typically monitored closely by medical professionals as they undergo withdrawal from opioids. Medications may be used during detox to help manage withdrawal symptoms and make the process more comfortable.

• Inpatient Treatment

[Inpatient treatment](#) involves staying at a residential facility where you will receive 24-hour care from medical and mental health professionals. This type of treatment can be very effective for those who have a severe addiction or who have relapsed after other forms of treatment.

• Outpatient Treatment

Outpatient treatment allows you to live at home while attending regular therapy sessions and meeting with a counselor or therapist. Outpatient treatment is less intensive than inpatient treatment and involves attending therapy sessions or other addiction recovery programs on a regular basis.

This type of treatment can be tailored to meet the individual needs of each patient, making it ideal for those who cannot commit to an inpatient program or who need more flexibility with their schedule. It can be more affordable, and may not be as intensive as other forms of treatment.

• Medication-Assisted Treatment

Medication-assisted treatment (MAT) involves using medication to help reduce cravings and withdrawal symptoms while also receiving counseling and behavioral therapy. MAT is often used in combination with other forms of treatment, such as inpatient or outpatient treatment.

• Sober Living Homes

Sober living homes are group homes for people in recovery from addiction. Residents are typically required to follow certain rules, such as abstaining from drugs and alcohol, attending regular meetings, and completing chores. Sober living homes can provide structure and support during early recovery.

• Aftercare

[Aftercare](#) refers to the continued support that someone in recovery receives after completing a formal treatment program. Aftercare can include individual therapy, group therapy, 12-step programs, and sober living homes

Contact Grand Falls Center For Recovery

It is clear that opioid addiction is a huge issue in the world today, and it can be difficult to overcome on your own. But if you or someone you know is struggling with opioid addiction, there is help out there.
